

ERRATUM

In the article "Benzodiazepine-Induced Persisting Amnesic Disorder: Are Older Adults at Risk?" appearing in the April 1998 issue of *Archives of Psychiatric Nursing* (Deborah D. Sumner, *Archives of Psychiatric Nursing*, 12(2), 119-125), Table 1 was printed incorrectly. The correct Table 1 is reproduced below.

Table 1. Benzodiazepines

Name	Average Half-Life Elimination (Hrs)	Active Metabolites Present	Length of Action
Alprazolam	12-15	+	Short
Chlor diazepam	50-100	+	Intermediate
Clonazepam	20-50	-	Intermediate
Clorazepate	30-300	+	Long
Diazepam	30-100	+	Long
Estazolam	10-20	+	Short
Flurazepam	100	+	Long
Halazepam	30-200	+	Long
Lorazepam	10-20	-	Short
Midazolam	2-3	-	Short
Oxazepam	3-20	-	Short
Prazepam	30-200	+	Long
Temazepam	6-20	-	Short
Triazolam	1-3	-	Short

NOTE: The combination of the drug and its metabolites (if any) determines the length of action of the benzodiazepine in the body.
